  No

Description

In the new development area “Vordere Voltastraße” in the South of Hattersheim, eight apartment buildings were built on a former industrial site in accordance with the KfW 40 standard with sustainability class. For this, the new neighborhood received the “DGNB Silver” certificate.

Problem

The floor-to-ceiling windows and doors had to be sealed. In order to obtain certification from the German Sustainable Building Council, the client opted for sustainable product systems that had been awarded the Emicode EC1 Plus certificate, among other things.
