Description

As the cutting and logistics site of the Vion Food Group, Vion Hilden GmbH primarily supplies the German food retail trade with beef and calf meat. At the heart of the company's hygiene processes is the washing hall for transport crates, which integrates internal logistics into the production cycle. As part of a comprehensive modernisation programme—including the installation of a new, more efficient crate washing system—the floor in the washing hall was completely refurbished. The aim was to permanently meet the high standards of hygiene, safety, and cost-effectiveness. A PU concrete system specially developed for wet areas was used, which offers a robust, slip-resistant, and jointless surface. This further increased hygiene standards and significantly simplified cleaning and maintenance of this heavily used area.

Problem

As the logistics hub for the Vion Food Group, Vion Hilden supplies German food retailers with beef and calf meat. As part of a modernisation programme, the washing hall was fitted with a new PU concrete floor—specially developed for wet areas. The robust, slip-resistant, and seamless surface meets the highest hygiene and safety standards and makes cleaning and maintenance much easier.
